CTG-Impact Echo (IE)
Data Examples

CTG - IMPACT ECHO

The following is an example of good CTG data.
Good data will have one frequency peak with a higher amplitude than any other peak. If the frequency spectra is simple and clear with one frequency peak, the thickness corresponding to the peak will be automatically picked and will appear under RESULTS, Plot 2 or Plot 3 on the bottom of the screen display. Except for velocity changes, no further analysis is typically needed for single echo-peak data.
